**Subject:** Statement request from NRL Counsel regarding 1-Phenylbutan-2-amine and N, alpha-diethyl-Benzeneethanamine [SEC=CONFIDENTIAL]

Good Morning [REDACTED] and [REDACTED]

I have had a request via the legal team to see if it is possible for someone at ASDTL to provide a statement for the NRL counsel in regards to the two stimulant substances detected in sample no 1234355 (1-Phenylbutan-2-amine and N, alpha-diethyl-Benzeneethanamine).

The contact at the NRL is [REDACTED] who is a barrister and a scientist, so he is right across such matters and more than happy to talk with someone at ASDTL.

His contact details are:

Phone [REDACTED]  
Email [REDACTED]

Another query the NRL has was regarding the cost of running a B sample analysis.

If you would be able to assist us with this matter it would be much appreciated. Please feel free to call me also if anything I have written is unclear.

Kind regards,

[REDACTED]

Just thought I'll let people know that DS has been sued because of an apparent illegal stimulant in there product  
Link -<http://www.nstices.com.au/2012/02/16.pdf>

Here's a breakdown:

1. Suspect that Craze contains Amphetamine which is not disclosed in the ingredients
2. The ingredients Dendrobex & Citramine - Are not listed as accepted dietary ingredients
3. The addition of Dendrobex & Citramine therefore could place craze as an "unapproved new drug" (no one knows what it does)

[Back to top](#)

**Subject:** Dendrobex in Craze (dendrobium or extract from the dendrobium orchid )  
[SEC=UNCLASSIFIED]

Hi [REDACTED]

I did not find any full relevant papers on dendrobium or extract from the dendrobium orchid (constituent of Craze), however, here is some interesting background information.

Google searches:

<http://newhope360.com/blog/meet-dmaas-replacement-dendrobium-extract>

<http://rawmusclegain.com/dendrobex>

The Mr supplement article suggest that Methyltyramine or N-methyltyramine is the new Methylhexanamine and may be present in may pre-work out supplements:

Dear all,

I have today sent the attached sanction notice along with the written reasons to Mr Errington. He does not have an email address so this has gone via courier.

I have also arranged for a copy of the reasons to be sent to the tribunal members and the attached public report has been emailed to the required recipients along with the written reasons.

## **Leagues Anti-Doping Tribunal**

### **Reasons for decision in the matter of Troy Errington**

Date of written reasons: 9 October 2012

Date of hearing: Wednesday 5 September 2012  
Level 2, Rugby League Central, Driver Avenue, Moore Park

Tribunal: Sir Laurence Street, Dr Grace Bryant and Mr Sean Garlick

1. These are the written reasons which supplement the oral statement given on behalf of the tribunal as permitted for by ADP rule 143.
2. This matter involves an allegation of an anti-doping rule violation by the rugby league player Troy Errington.
3. The hearing took place on the evening of Wednesday 5 September 2012. Mr J Marshall SC, Mr D Mitchell (barrister) and Ms E Simpson were present as counsel assisting and otherwise representing NSWRL. Mr James Hall represented Troy Errington. The tribunal was provided with a bundle of documents which were received into evidence.
4. In 2012 Mr Errington played for the Guildford club in the Sydney Shield. On 28 July 2012 he was asked to provide a urine sample. No issue was raised as to the testing or analysis procedures. The analysis of the A and B samples established the presence of two stimulants: phenylbutan-2-amine, and N, alpha-diethyl-benzeneethanamine.
5. A report from the laboratory (tab 8 of the materials supplied to the tribunal) explained how these two stimulants were within the prohibited list as specified stimulants under category S6b. That was not disputed although Mr Hall did comment on the fact that the particular substances were not specifically named in the prohibited list. Apparently the explanation is that it would not be practicable to name every stimulant in the prohibited list and for that reason category S6b provides examples of specified stimulants and concludes with the catch all "other substances with a similar chemical structure or similar biological effect".
6. The NSWRL alleged that the player had committed the ADRV of presence under ADP rule 32 (WADC 2.1). Mr Errington accepted that these two stimulants were present in his sample and sought to explain that and rely

upon ADP rule 158 for specified substances (WADC 10.4) and ADP rule 159 being the No Fault or Negligence rule (WADC 10.5.1).

7. Mr Errington was suspended provisionally on 24 August 2012. His team was scheduled to play a semi-final on the weekend of 8 September 2012. For that reason an expedited hearing took place on Wednesday 5 September 2012. Mr Errington was hopeful that either he would be given no sanction or a very short sanction such that he would be able to play in the semi-final.
8. Mr Errington provided a written statement and gave oral evidence. His case was that he had bought two supplements: one called "1.MR" and the other called "Mesomorph". His written statement said that he purchased these between April and July 2012. He sought to clarify this and said that they were purchased in April. He said that he used these two supplements for training at the gym on the basis of recommendations from his friends. He also said that the two containers ran out before June 2012.
9. Mr Errington signed a playing contract on 5 June 2012. He played his first game on 17 June 2012. Some 8 weeks after he signed the playing contract he tested positive. His case is that he last used the supplements before or just at the time he signed his contract in early June and that he did not use them again and did not use anything else that might have contained a prohibited substance at any point after 5 June 2012.
10. When he was cross examined Mr Errington, on more than one occasion, agreed that he had been using the supplements in July 2012 but then later sought to retract that concession.
11. Mr Errington also said that he had not received any anti-doping education at all. There was some evidence which indicated he may have received education as other players at his former club had received anti-doping education at formal sessions. It was submitted by counsel assisting that it was improbable that he had received no anti-doping education whatsoever despite having played Harold Matthews and SG Ball football for three seasons. In the result that we have reached we do not need to decide these questions. We do believe that better records of attendance at anti-doping education sessions should be kept so that there is no room for doubt as to whether a particular rugby league player has received some form of anti-doping education. We would be disappointed to say the least if a matter came before the tribunal in future seasons where there was no formal record of anti-doping education of the player concerned.

12. Mr Hall submitted that Troy Errington had available to him two defences. He submitted that there was no fault or negligence on behalf of Mr Errington which gave him a full defence under rule 159 (WADC 10.5.1). He also submitted that the elements of rule 158 (WADC 10.4) had been established such that the tribunal could give just the minimum sanction of a reprimand with no further period of ineligibility. He pointed to Mr Errington's evidence that the stimulants must have come from one or other or both of the supplements 1.MR and Mesomorph and therefore he had established how the stimulants entered his body. Next he submitted that because Mr Errington had only used the supplements at training in the gym before being contracted to play rugby league he could not have intended to enhance sport performance. Finally he submitted that the corroborating evidence came from the date of the playing contract.
13. On the other side it was submitted there was no proper evidence as to how the stimulants had entered the player's body. The report from the laboratory (tab 8) had said that to establish whether the stimulants had come from the supplements the laboratory would have to analyse the same containers or if the same containers were not available the same batch that had been used by the athlete. The player did not produce the containers, any residue from the containers or even freshly purchased containers of the supplements. The player had no laboratory analysis. The player had no evidence from the manufacturer or the distributor that suggested these stimulants were in those supplements. Internet searches in relation to the supplements 1.MR and Mesomorph were provided to the tribunal. The internet searches did not identify these stimulants as being present in the supplements. However the internet searches did show that other prohibited stimulants were included in the ingredients for these products.
14. It was further submitted against Mr Errington that whatever stimulant he was taking must have been used very proximate to or on the day of the sample being provided. Although this was denied by Mr Errington a further statement from the quality manager of the laboratory was provided which indicated that the laboratory was able to detect amphetamines only for a few days after administration. That scientist's report also said that whilst he could not be certain, the concentrations of the stimulants suggested that ingestion had occurred in the 24 hour period prior to collection of the urine sample. For these reasons it was submitted against him that he had not established an absence of intention to enhance sport performance.

15. Further it was submitted against Mr Errington that he had not been wholly truthful to the tribunal, that his evidence did not establish any of the elements under rule 158 (WADC 10.4) and that there was no scope for its operation on the facts of this case.
16. In relation to rule 159 (WADC 10.5.1) the tribunal was taken to the comments that appear from the WADA code. Those comments and the examples given to illustrate the operation of the rule make it clear that in a case like this there is no possibility for the athlete to rely upon no fault and no negligence. It was further said against Mr Errington that the failure to make any proper inquiry as to the nature of the products 1.MR and Mesomorph (which he claimed had to be the cause of the positive test result) was inconsistent with a finding of no fault and no negligence. The tribunal was shown that internet research for the products 1.MR and Mesomorph would have identified that they contained a different banned substance and in relation to product 1.MR there was a warning that it "may cause a positive test for substances that are banned by some sporting or government associations". We accept that these are factors that negate a finding of no fault and no negligence.
17. The tribunal was also referred to its earlier decision of May 2011 in the matter of players Humble and Oake. There were several aspects of that decision which were submitted to be relevant here. On that occasion this tribunal (differently constituted) had said that it was a significant factor in favour of those players that they had not purchased the product themselves. We said "this is not a case in which either player went to some external supplier without the knowledge of the relevant club". We also said "this is not a case where either player simply relied upon his own research". We emphasised that "prominent is the total absence of the players' involved in the purchase of this substance". The position of Mr Errington is in contrast to those players. That is relevant because in that case, on more favourable evidence, we were not prepared to find a defence under rule 158 (WADC 10.4).
18. Overall our conclusion is against Mr Errington. We do not propose to express any credit findings in these reasons. Suffice it to say the tribunal was not satisfied as to any of the elements necessary for Mr Errington to rely upon rule 158 (WADC 10.4). He cannot bring himself within rule 159 (WADC 10.5.1).
19. Following deliberations we reconvened on the evening of the hearing. We had reached the view that the player could not bring himself within the rules that could afford a defence or leniency. Nevertheless we wished to

have the benefit of any further submission that might arise once we announced that view.

20. Mr Hall further submitted that there should only be a reprimand. When pressed on how the tribunal could do that, Mr Hall accepted that if the tribunal found he did not come within rule 158 it is very difficult. Mr Hall further suggested that this was a situation where there should be a power to bring in a lesser sanction than 2 years.
21. The tribunal then conferred in open session and all three members confirmed the earlier view that neither defence was established and that a two year sanction therefore applied by force of the rules.
22. The chairman then gave a short oral statement on behalf of the tribunal indicating the outcome: The facts were within a small compass. The drug was found in the sample taken from Mr Errington, which was not disputed, and accordingly it became a matter for him to establish how the drug got into his system. Mr Errington was not able under rule 158 to persuade the tribunal as to how the substance entered his system. Mr Errington was unable to establish that he wears no fault or negligence. There was no scope under the rules for the tribunal to be more lenient as the rules are part of a deliberate framework in order to avoid uncertainty in the minds of athletes and on the part of tribunals charged with the duty of having to suspend somebody who cannot fit himself within what are the fairly broad bases for exculpating an athlete that has drugs in his system. Mr Errington failed in a number of quite significant requirements. In that situation rule 153 (WADC 10.2) is absolute in its operation requiring a sanction of two years. Mr Errington was not able to establish any other basis upon which the tribunal might take a lenient view of the circumstances and limit his suspension to a shorter period than the two years prescribed. In all the circumstances the tribunal was of the view that Mr Errington was guilty of the alleged anti-doping rule violation that brought him before the tribunal.
23. The consequence of the tribunal's decision is that the standard sanction in ADP rule 153 (WADC 10.2) must apply being a sanction of two years ineligibility which will expire on midnight 24 August 2014.

**PUBLIC REPORT OF DISPOSITION OF ANTI-DOPING MATTER RE TROY  
ERRINGTON  
WADC 14.2.2  
WADC 14.2.4**

1. Please treat this as formal notification to the bodies above as required by WADC 14.2.2 of the disposition of an anti-doping matter.
2. The details are as follows:
  - (1) Athlete: Mr. Troy Errington
  - (2) Country: Australia
  - (3) Sport: Rugby League
  - (4) Competition Level: at time of ADRV – Sydney Shield
  - (5) Sample collection date: 28 July 2012
  - (6) Provisional suspension: 24 August 2012
  - (7) Notice of alleged ADRV: 27 August 2012
  - (8) The analysis of the sample disclosed the presence of phenylbutan-2-amine and N, alpha-diethyl-benzeneethanamine which are stimulants belonging to a class of substances (S6b) prohibited by the Prohibited List as applicable in 2012.
  - (9) The test was collected on an In-Competition basis.
  - (10) The anti-doping rule found to have been violated was for presence under the equivalent of WADC 2.1.
  - (11) Consequences imposed: A sanction of a two year period of Ineligibility.

Hi [REDACTED]

Thanks for all the assistance you have been providing.

Can we please request a generic statement from you which describes how N,alpha-diethyl-Benzeneethamine and 1 - Phenylbutan-2-amine are classified as stimulants on the WADA prohibited List.

This will be used for cases involving these substances moving forward. I have attached the statement from 1234355 which [REDACTED] provided previously for your reference.

Regards

### STATEMENT CONCERNING SAMPLE 1234355

To Whom it may concern.

Sample No. B1234355 was analysed on 21<sup>st</sup> August 2012 and gave a finding for N,alpha-diethyl-Benzeneethamine and 1-Phenylbutan-2-amine (alpha-ethylphenethylamine).

Both these substances are stimulants.

The substances are chemically related to the Non-Specified Stimulants Amphetamine and Ethylamphetamine listed on the 2012 WADA Prohibited List. Both these substances also have similar chemical structure and similar biological effects to the specified stimulants (S6b). As the said substances are not listed as Non-Specified Stimulants (S6a) they are classified as Specified Stimulants (S6b) by the 2012 Prohibited List issued by the World Anti-Doping Authority, as substances with a similar chemical structure or similar biological effect.

I have been told that the athlete claims the substances came from over the counter products I.M.R and Mesamoreh (I have never heard of Mesamoreh). To establish whether N,alpha-diethyl-Benzeneethamine and/or 1-Phenylbutan-2-amine are present in I.M.R and Mesamoreh would require the analysis of these products for the said substances. The analysis would have to be conducted on the same containers or if the same containers are not available the same batch that was used by the athlete.

14 December 2012

## DOPING VIOLATION

### NSW rugby league player Troy Errington banned for two years

The Australian Sports Anti-Doping Authority (ASADA) today acknowledged the decision of the Leagues Anti-Doping Tribunal to impose a two-year sporting ban on Sydney Shield rugby league player Troy Errington for the presence of prohibited substances.

The substances 1-Phenylbutan-2-amine and N,alpha-diethyl-benzeneethanamine were detected in a sample ASADA collected in-competition from Mr Errington at a Sydney Shield match on 28 July 2012.

The ban imposed on Mr Errington by the Leagues Anti-Doping Tribunal was backdated to commence on the date of his provisional suspension. Therefore, he is ineligible to participate as an athlete or support person, in any sport that has adopted a World Anti-Doping Agency (WADA) compliant anti-doping policy until 25 August 2014.

While 1-Phenylbutan-2-amine and N,alpha-diethyl-benzeneethanamine are not specifically named on WADA's 2012 Prohibited List, they have similar chemical and biological effects to amphetamines. As a result, they are classed as Category 6b stimulants on the List and are prohibited in competition.

Generally, stimulants act directly on the central nervous system to speed up parts of the brain and body. They can increase alertness and reduce fatigue in athletes.

This matter serves as a timely reminder for athletes to carefully consider their use of supplements as the contents can vary from batch to batch and may intentionally or unintentionally contain prohibited substances.

Athletes are responsible for any substance found in their body and there have been cases where both Australian and international athletes have been sanctioned after they have used supplements that they thought were okay, but which were actually contaminated with prohibited substances.

Any athletes unaware of their responsibilities are encouraged to seek additional information online at ASADA's website [www.asada.gov.au](http://www.asada.gov.au)

## DOPING VIOLATION

### NSW rugby league player Troy Errington banned for two years

The Australian Sports Anti-Doping Authority (ASADA) today acknowledged the decision of the Leagues Anti-Doping Tribunal to impose a two-year sporting ban on Sydney Shield rugby league player Troy Errington for the presence of prohibited substances.

The substances 1-Phenylbutan-2-amine and N,alpha-diethyl-benzeneethanamine were detected in a sample ASADA collected in-competition from Mr Errington at a Sydney Shield match on 28 July 2012.

The ban imposed on Mr Errington by the Leagues Anti-Doping Tribunal was backdated to commence on the date of his provisional suspension. Therefore, he is ineligible to participate as an athlete or support person, in any sport that has adopted a World Anti-Doping Agency (WADA) compliant anti-doping policy until 25 August 2014.

While 1-Phenylbutan-2-amine and N,alpha-diethyl-benzeneethanamine are not specifically named on WADA's 2012 Prohibited List, they have similar chemical and biological effects to amphetamines. As a result, they are classed as Category 6b stimulants on the List and are prohibited in competition.

Generally, stimulants act directly on the central nervous system to speed up parts of the brain and body. They can increase alertness and reduce fatigue in athletes.

This matter serves as a timely reminder for athletes to carefully consider their use of supplements as the contents can vary from batch to batch and may intentionally or unintentionally contain prohibited substances.

Athletes are responsible for any substance found in their body and there have been cases where both Australian and international athletes have been sanctioned after they have used supplements that they thought were okay, but which were actually contaminated with prohibited substances.

Any athletes unaware of their responsibilities are encouraged to seek additional information online at ASADA's website [www.asada.gov.au](http://www.asada.gov.au)

Hi [REDACTED] and [REDACTED]

For your information please find attached an ASADA media release regarding an anti-doping rule violation by Sydney Shield rugby league player, Troy Errington, for the presence of 1-Phenylbutan-2-amine and N,alpha-diethyl-benzeneethanamine.

We plan on publicly announcing this matter on Friday (14 December) to meet our requirements under the Code.

We are also sending this release onto the sport for their information.

If you have any questions or concerns, please do not hesitate to contact me on the details below.

Regards

**Importance:** High

Hi [REDACTED]

I've left a message about the following so feel free to give me a call with any questions.

Please find attached an ASADA media release about Sydney Shield rugby league player, Troy Errington, who has received a two-year sports ban for the presence of 1-Phenylbutan-2-amine and N,alpha-diethyl-benzeneethanamine.

Please note that this has been through the appropriate approvals and we are planning on issuing it on Friday, 14 December.

Please send this onto your sports contact for their information- it would be appreciated if you would cc me into the email. I've included an email template below for your use.

**IMPORTANT:** While it is included in the email template, if you are talking with your contact please reinforce with them that the matter is **confidential** until we issue the announcement.

Please let me know if you have any questions.

Regards

[REDACTED]

Dear

As the sanctioning of Troy Errington has now taken place, ASADA needs to make a public announcement of this matter in line with our legislative and World Anti-Doping Code requirements.

Please note that the attached media release has been through the appropriate approvals and we are planning on issuing it on Friday, 14 December.

Please note the matter is confidential until we issue the announcement.

Regards

**Subject:** TRIM: RE: Sample 1231887 [SEC=UNCLASSIFIED]

**TRIM Record Number:** BDOC12-46772

Hi [REDACTED]  
Below I have outlined the time line for the reporting of a positive result for sample A1231887 (NA12/00980).

The sample was screened for stimulants on the 15th February 2012 and two unusual peaks were observed in the chromatogram when the data was analysed on the 16th February 2012. A short time later the same two peaks were observed in a second and separate sample. The GC-MS library was able to give a very good match for one of the compounds which was identified as alpha-ethylphenethylamine (1-phenylbutan-2-amine). The second and more significant compound could not be identified by the GC-MS library. Further investigations on our part led us to form an opinion that the second and major compound was N,alpha-diethyl-Benzeneethanamine. At this point the ASDTL sought to source the two suspected compounds. An order for alpha-ethylphenethylamine (1-phenylbutan-2-amine) was placed with Sigma-Aldrich on the 30th April 2012 and received into the ASDTL on the 16th May 2012. An order for N,alpha-diethyl-Benzeneethanamine was placed with Aurora Fine Chemicals on the 2nd May 2012 and received into the ASDTL on the 3rd July 2012. The retrospective confirmation analysis for alpha-ethylphenethylamine and N,alpha-diethyl-Benzeneethanamine in sample A1231887 was conducted on a separate aliquot on the 16th July 2012 and the result was reported to ASADA on the 17th July 2012.

Hi [REDACTED]

Legal has asked if you can provide a short e-mail which explains the timelines for the reporting of A1231887, the positive sample for phenylbutamine and alpha-diethylbenzeethanamine.

This would may include things like an unusual peak was first identify on xx date and NMI sort to obtain appropriate standards on xx date to enable confirmation. Standards were received on xx date etc..

Please feel free to call me if you have any questions.

Regards

---

The Australian Sports Anti-Doping Authority (ASADA) today acknowledged the decision of the Leagues Anti-Doping Tribunal to impose a two-year sporting ban on Sydney Shield rugby league player Troy Errington for the presence of prohibited substances.

The substances 1-Phenylbutan-2-amine and N,alpha-diethyl-benzeneethanamine were detected in a sample ASADA collected in-competition from Mr Errington at a Sydney Shield match on 28 July 2012.

The ban imposed on Mr Errington by the Leagues Anti-Doping Tribunal was backdated to commence on the date of his provisional suspension. Therefore, he is ineligible to participate as an athlete or support person, in any sport that has adopted a World Anti-Doping Agency (WADA) compliant anti-doping policy until 25 August 2014.

While 1-Phenylbutan-2-amine and N,alpha-diethyl-benzeneethanamine are not specifically named on WADA's 2012 Prohibited List, they have similar chemical and biological effects to amphetamines. As a result, they are classed as Category 6b stimulants on the List and are prohibited in competition.

Generally, stimulants act directly on the central nervous system to speed up parts of the brain and body. They can increase alertness and reduce fatigue in athletes.

This matter serves as a timely reminder for athletes to carefully consider their use of supplements as the contents can vary from batch to batch and may intentionally or unintentionally contain prohibited substances.

Athletes are responsible for any substance found in their body and there have been cases where both Australian and international athletes have been sanctioned after they have used supplements that they thought were okay, but which were actually contaminated with prohibited substances.

Any athletes unaware of their responsibilities are encouraged to seek additional information online at ASADA's website [www.asada.gov.au](http://www.asada.gov.au)

**To:** [REDACTED]  
**Cc:** [REDACTED]  
**Subject:** RE: For approval - response to David Mark (ABC Background Briefing) and Nikki Tugwell (730 Program) [SEC=UNCLASSIFIED]

Thanks [REDACTED]

[REDACTED] I have made that change to the response below for your consideration:

**David Mark – ABC Background Briefing**

Dear David

The following has been provided to you as background information to assist in addressing the questions you have raised.

Does ASADA ever approve a supplement program? Can a doctor or sports scientist come to ASADA and say "I am going to give my athletes X, Y and Z" and get the seal of approval from ASADA? (Or, do all inquiries go through the hotline/CYS?)

Generally ASADA's policy is to not approve a supplement or a supplement program.

The reasons for this are outlined in the supplement warning information detailed on ASADA's [website](#).

If a supplement contains IGF-1 - which is a banned supplement - would that mean using the supplement puts an athlete in breach of the WADA code?

The [substance](#) IGF-1 is prohibited in sport under the World Anti-Doping Agency's Prohibited List.

It is for the reasons provided on [our website](#) that we are unable to answer your question regarding the status of a supplement. However, our warning about supplement use is very clear— athletes who take supplements are at risk of committing a possible anti-doping rule violation.

**Nikki Tugwell – 7.30 Program**

I notice the substance N,alpha-diethylbenzeneethanamine is listed on the 'check my substances' website.

Can you please clarify if the product DS Craze is a banned product (includes this substance) for Australian footballers?

The [substance](#) N,alpha-diethylbenzeneethanamine is prohibited in-competition only under the World Anti-Doping Agency's Prohibited List.

Because supplement (also referred to as dietary or nutritional supplements) manufacturing processes can lead to their contents varying from batch to batch, ASADA cannot advise whether, at any particular time, a specific supplement, or batch of a supplement, contains prohibited [substances](#).

It is for the reasons provided on [our website](#) that we are unable to answer your question regarding the status of this supplement. However, our warning about supplement use is very clear— athletes who take supplements are at risk of committing a possible anti-doping rule violation.

**Subject:** RE: For approval - response to David Mark (ABC Background Briefing) and Nikki Tugwell (730 Program) [SEC=UNCLASSIFIED]

Hi [REDACTED]

Suggest deleting this line from the David Mark response only "Because supplement (also referred to as dietary or nutritional supplements) manufacturing processes can lead to their contents varying from batch to batch, ASADA cannot advise whether, at any particular time, a specific supplement, or batch of a supplement, contains prohibited substances." I think the rest of the response adequately deals with the question.

**Subject:** For approval - response to David Mark (ABC Background Briefing) and Nikki Tugwell (730 Program)  
[SEC=UNCLASSIFIED]  
**Importance:** High

Hi [redacted] and [redacted]

For your approval please find below draft responses below to David Mark (ABC Background Briefing) and Nikki Tugwell (730 program). The responses are based on the discussions this morning between Michelle/Tony/Darren and I which I hope are accurately reflected.

Please note that Michelle and Tony have reviewed these.

If you could advise if you are okay with these it would be appreciated.

Thanks

David Mark – ABC Background Briefing

Dear David

The following has been provided to you as background information to assist in addressing the questions you have raised.

Does ASADA ever approve a supplement program? Can a doctor or sports scientist come to ASADA and say "I am going to give my athletes X, Y and Z" and get the seal of approval from ASADA? (Or, do all inquiries go through the hotline/CYS?)

Generally ASADA's policy is to not approve a supplement or a supplement program.

The reasons for this are outlined in the supplement warning information detailed on ASADA's [website](#).

If a supplement contains IGF-1 - which is a banned supplement - would that mean using the supplement puts an athlete in breach of the WADA code?

The substance IGF-1 is prohibited in sport under the World Anti-Doping Agency's Prohibited List.

Because supplement (also referred to as dietary or nutritional supplements) manufacturing processes can lead to their contents varying from batch to batch, ASADA cannot advise whether, at any particular time, a specific supplement, or batch of a supplement, contains prohibited substances.

It is for the reasons provided on our website that we are unable to answer your question regarding the status of a supplement. However, our warning about supplement use is very clear— athletes who take supplements are at risk of committing a possible anti-doping rule violation.

**Nikki Tugwell – 7.30 Program**

I notice the substance N,alpha-diethylbenzeneethanamine is listed on the 'check my substances' website.

Can you please clarify if the product DS Craze is a banned product (includes this substance) for Australian footballers?

The substance N,alpha-diethylbenzeneethanamine is prohibited in-competition only under the World Anti-Doping Agency's Prohibited List. [note that I cannot actually find this substance on CYS but its status is listed in the Errington matter]

Because supplement (also referred to as dietary or nutritional supplements) manufacturing processes can lead to their contents varying from batch to batch, ASADA cannot advise whether, at any particular time, a specific supplement, or batch of a supplement, contains prohibited substances.

It is for the reasons provided on our website that we are unable to answer your question regarding the status of this supplement. However, our warning about supplement use is very clear— athletes who take supplements are at risk of committing a possible anti-doping rule violation.

Hi [REDACTED],

I was out of the office on Monday and have just been looking into this for you. Good news as I am able to send the results of the analysis to you (please see attached). You will see that the DS craze does have the N, alpha-diethyl-Benzenethanamine which looks to be the parent compound. Please note that this was only one sample from the batch identified in the report of analysis.

With regards to the communications, I have let our comms team know we are passing this to you. If you want to keep us updated on what your communications plans are it would be appreciated. We are happy for your communications team to speak with ours. [REDACTED]@asada.gov.au will be the best contact.

[REDACTED] on another note, have you heard anything about the re-call for the Immulte 1000 IGF-1 kits used in the biomarker test (please see attached). Do you have any idea which batches were used to validate the IGF-1 immulite assay or if there is any implications for the biomarker test?

This information is provided to you in accordance with the information sharing agreement between ASADA and UKAD.

Regards

Thanks [REDACTED]

As you know, we have been very interested in understanding more about what is currently happening.

We understand you are going through a legal process and we do not want or intend to undermine that in any way. We do however have serious concerns about this substance and want to make sure we have the full picture so we can be prepared. We do not wish to be on the back foot like so many ADOs were following the spate of methylhexanamine cases last year. We are keen to respond quickly to ensure we're providing athletes with the best possible advice. The original information on this substance came from yourselves and whilst we are grateful for you giving us the heads up about this, we do wish to be able to do something with this information soon rather than wait for reporting restrictions to be lifted from your ongoing cases. Our information sharing agreement with you, we hope, gives you the necessary reassurances that any information you give us pertaining to this substance will be treated appropriately.

We'd very much appreciate it if you could share as much information as is possible and we'd welcome the opportunity to discuss with your comms team their plans so that we can ensure that our lines are consistent with yours as well as assuring you that we are treating the information in a way in which you are comfortable and does not undermine your current cases.

We have ourselves looked into the Product Craze that was mentioned at the USADA symposium meeting. Attached is an email exchange

Thanks

**Subject:** RE: Stimulant [SEC=UNCLASSIFIED]

Hi [REDACTED],

I hope you are both well.

Sorry for the lack of updates on this guys.

To answer your questions:

did I remember the above correctly

- Yes – 1-Phenylbutan-2-amine is the correct name.

have you heard from other countries as well that have encountered this stimulant

- I have not heard of this in any other countries.

can I refer the lab to [REDACTED] and/or [REDACTED] or is this something that should not have been shared?

- Can I ask what you're looking for from [REDACTED]? Are you just after standards? Perhaps I can request this for you.

Also, guys our matters are locked up in our legal proceedings at the moment so I cannot comment more at this stage.

Our Comms team are working up the communication plan for this. The realistic timeframe is January following the Christmas break and major sports returning. Ill keep you updated when more information comes to hand.

Cheers

**Sent:** Tuesday, 4 December 2012 10:59 PM  
**To:** [REDACTED]  
**Subject:** Stimulant

Hi [REDACTED] and [REDACTED]

If I am not mistaken, you two mentioned 1-phenyl-butan-2-amine as a possible new (designer?) stimulant. I think [REDACTED] also mentioned some sort of "early warning report" from WADA. I though I'd check it with our lab in Cologne in relation to their supplement screenings, but they have let me know that they do not have a reference sample or reference substance for the substance.

I do not want to create new problems, but if I remember correctly you two were quite concerned about this substance. So my questions are:

- did I remember the above correctly?
- have you heard from other countries as well that have encountered this stimulant?
- can I refer the lab to [REDACTED] and/or [REDACTED], or is this something that should not have been shared?

Hope you two can give a short reaction. Cheers,

[REDACTED]

G'day [REDACTED]

Yeah, a few things going on.

So just to confirm, because it does have psychotropic properties it is illegal under NSW legislation?

Cheers

Subject: Re: FW: Query about the new substance we are finding in supplements (N,alpha-diethyl-benzeneethanamine) [SEC=UNCLASSIFIED]

Hi [REDACTED],

[REDACTED] is correct. Methylamphetamine is N,alpha-dimethylbenzeneethanamine.

Considering the analogue clause in the Drug Misuse and Trafficking Act 1985: From a structural point of view, N,alpha-diethylbenzeneethanamine is an analogue of Ethylamphetamine. The analogue clause, however, also specifies that the analogue must have 'psychotropic properties'. Check with [REDACTED] whether the substance has the requisite properties.

Cheers,

[REDACTED]

Subject: FW: Query about the new substance we are finding in supplements (N,alpha-diethyl-benzeneethanamine) [SEC=UNCLASSIFIED]

[REDACTED]  
  
This is the substance below.

We've asked the TGA about this in the past and they have said basically it is a synonym for meth. However, the thing they have missed is that, according to our chemist, N,alpha-dimethyl-benzeneethanamine is the synonym for meth whereas the stuff we are finding is N,alpha-diethyl-benzeneethanamine (I mean, how could you possibly get them confused?)

If you could please let us know if this substance is illegal in NSW, it would be greatly appreciated.

Cheers

**Sent:** Tuesday, 2 October 2012 3:49 PM  
**To:** [REDACTED], [SCOC]  
**Subject:** Information request - stimulants [SEC=UNCLASSIFIED]

G'day [REDACTED]

Below is a fairly long e-mail chain between ourselves and the TGA about some new stimulants we are seeing in some positive tests.

Our initial thoughts were that these may be the replacement for Methylhexaneamine after we detected quite a few cases of it last year. However, in a meeting we had a couple of weeks ago with several State police services, it was mentioned that "legal" stimulants are now a major part of the legal high market. As such, we were wondering if QPS has noted seizures of products containing:

- Alpha-diethyl-Benzeneethamine
- 1-Phenylbutan-2-amine

particularly if these are ingredients in legal high drugs.

BTW, our science officer has said that the comment about Alpha-diethyl-Benzeneethamine being the same as methamphetamine is not right as the synonym is Alpha-dimethyl-Benzeneethamine (hard to know how he got them confused).

Cheers

### Alpha-diethyl-Benzeneethamine

This is a synonym for the substance methamphetamine (classified as a psychotropic under U.N convention). Methamphetamine has two stereoisomers (levomethamphetamine and dextromethamphetamine). Both are considered prohibited imports and exports.

### 1-Phenylbutan-2-amine

Is chemical closely related to amphetamine, and research indicates in offers similar physiological stimulus and effects to amphetamines, however it is not considered a prohibited import or prohibited export.

I would recommend contacting the Australia Federal Police about the status of both these substances in regards to the *Criminal Code Act 1995*.

I hope this has assisted you

Hi [REDACTED]

Sorry about the delay

I think perhaps you could ask TMU about these ones being that they appear to be closely related to methyl amphetamines. In addition you could also contact the Medicines and Poisons Scheduling Secretariat to see if these substances may be captured as derivatives.

Regards

[redacted]

As discussed, we have had athletes test positive to the substance below (one or both may be a metabolite).

- \* Alpha-diethyl-Benzeneethamine
- \* 1-Phenylbutan-2-amine

From information we have received, we believe it may be in one or more of the following supplements:

- \* Craze Performance Fuel
- \* 1MR
- \* Mesomorph

As I mentioned to [redacted], we think this may be the substance that is replacing Methylhexaneamine in supplements.

Also, for your information, ASDTL has advised us that this substances are chemically very closely related to methyl amphetamines.

Grateful if you could check whether these substances have come to notice in any of these or other supplements.

Cheers

**Subject:** TRIM: supplements [SEC=UNCLASSIFIED]

Hi [REDACTED], [REDACTED],

I just wanted to follow-up on a conversation I had with [REDACTED] recently.

We wanted to know if you have any of the following supplements in your stock. These may contain the new stimulant we are seeing (1-Phenylbutan-2-amine and its possible metabolite N, alpha-diethyl-Benzeneethamine).

- IMR – 1 More Rep
- Mesomorph
- CRAZE performance fuel

Additionally, can I request a statement from you which describes how 1-Phenylbutan-2-amine and N, alpha-diethyl-Benzeneethamine are of similar chemical structure or biological effects to the S7 stimulants. Can you also please include any information you have received from WADA regarding these compounds. This will assist with the running of these recent matters.

Please let me know if you have any questions.

Kind Regards  
[REDACTED]

**To:** [REDACTED]  
**Cc:** [REDACTED]  
**Subject:** TRIM: RE: supplements [SEC=UNCLASSIFIED]

**HP TRIM Record Number:** BDOC13-17990

Hi [REDACTED]

The compound 1-phenylbutan-2-amine is also known as alpha-ethylphenethylamine. This compound is chemically related to amphetamine which is also known as alpha-methylphenethylamine. Alpha-ethylphenethylamine only differs from amphetamine by the substitution of the methyl group at the alpha position with an ethyl group.

The compound N,alpha-diethyl-Benzeneethanamine is chemically related to ethylamphetamine which is also known as N-ethyl-alpha-methyl-Benzeneethanamine. N,alpha-diethyl-Benzeneethanamine only differs from ethylamphetamine by the substitution of the methyl group at the alpha position with an ethyl group.

When ethylamphetamine is metabolised it undergoes N-de-ethylation to produce amphetamine as a metabolite. The same metabolic process with N,alpha-diethyl-Benzeneethanamine would lead to the production of 1-phenylbutan-2-amine. We have not proven this and we have not been able to find any information in the literature on the metabolism of N,alpha-diethyl-Benzeneethanamine. Hence at this stage we can only say that it is highly likely that 1-phenylbutan-2-amine is a metabolite of N,alpha-diethyl-Benzeneethanamine.

When we approached WADA about these compounds they informed us that they fall under Section S6B of the 2012 Prohibited List as substances with similar chemical structure or biological effects.

G'day [REDACTED]

Can you check whether the following substances have come to the TGA's notice.

- Alpha-diethyl-Benzeneethamine
- 1-Phenylbutan-2-amine

We think these substances may be replacement stimulants for methylhexaneamine (1,3-dimethylamylamine) with its impending listing. As such, we believe these substances may be in supplements.

If these substances have come to notice, can you please advise if they were in a particular product and what the name of that product is.

Cheers

[REDACTED]

### Alpha-diethyl-Benzeneethamine

This is a synonym for the substance methamphetamine (classified as a psychotropic under U.N convention). Methamphetamine has two stereoisomers (levomethamphetamine and dextromethamphetamine). Both are considered prohibited imports and exports.

### Phenylbutan-2-amine

Is chemical closely related to amphetamine, and research indicates in offers similar physiological stimulus and effects to amphetamines, however it is not considered a prohibited import or prohibited export.

I would recommend contacting the Australia Federal Police about the status of both these substances in regards to the *Criminal Code Act 1995*.

I hope this has assisted you

Hi [REDACTED]

Sorry about the delay

I think perhaps you could ask TMU about these ones being that they appear to be closely related to methyl amphetamines. In addition you could also contact the Medicines and Poisons Scheduling Secretariat to see if these substances may be captured as derivatives.

Regards

As discussed, we have had athletes test positive to the substance below (one or both may be a metabolite).

- \* Alpha-diethyl-Benzeneethamine
- \* 1-Phenylbutan-2-amine

From information we have received, we believe it may be in one or more of the following supplements:

- \* Craze Performance Fuel
- \* 1MR
- \* Mesomorph

As I mentioned to [REDACTED], we think this may be the substance that is replacing Methylhexaneamine in supplements.

Also, for your information, ASDTL has advised us that this substances are chemically very closely related to methyl amphetamines.

Grateful if you could check whether these substances have come to notice in any of these or other supplements.

Cheers

Hi,

my name is [REDACTED] and i am a news reporter for the Swedish public service television. I have a question regarding a supplement called "Craze" that is produced by Driven Sports.

I have heard that the supplement is banned in Australia. Is that true?

If so, why is it banned?

Kindly Regards,

[REDACTED].

Hi [REDACTED]

In Australia, supplements that belong to the pill, potion and powder category fall under the control of the Therapeutic Goods Administration.

As such, queries regarding a supplement's status should be directed to [the TGA](#).

ASADA's position on supplements has been consistent for many years and can be found on our [website](#). This position has been conveyed to sports and athletes on a number of occasions. One such occasion occurred in 2010 when [ASADA cautioned athletes](#) in the use of supplements following a number of positive tests for methylhexanamine. It is for the reasons provided on our website that we are unable to definitively provide athletes with advice on supplement products. However, our warning about supplement use is very clear— athletes who take supplements are at risk of committing a possible anti-doping rule violation.

**Subject:** Swedish public service television asking about Craze

Hi,

my name is [REDACTED] and i am a news reporter for the Swedish public service television. I have a question regarding a supplement called "Craze" that is produced by Driven Sports.

I have heard that the supplement is banned in Australia. Is that true?

If so, why is it banned?

Kindly Regards,  
[REDACTED]

**Subject:** Swedish television and supplement Craze

Hi,

i am a news reporter at the Swedish Public Service Television company, SVT. I recently did a story on the popular supplement "Craze" from Driven Sports..

I asked the The National Laboratory of Forensic Science in Sweden, SKL(the same laboratory that works for the Swedish Police), to analyze Craze. The results showed a compound that is classified by WADA and is not listed on the list of contents of the product.

The substances is called "N-ethyl-1-phenyl-2-butylamine" and is a chemical relative to methamphetamine.

I have been informed that Craze is banned in Australia, but I havent yet seen any official statements. Could you confirm or deny that Craze is banned in Australia?

Kindly regards,

Dear [REDACTED]

#### Important background information

To provide you with some context which prefaces all of ASADA's responses below, ASADA implements the World Anti-Doping Code administered by the World Anti-Doping Agency (WADA).

The cornerstone of the Code is the Prohibited List which identifies which substances and methods are prohibited in- and out-of-competition.

It is WADA who annually prepares and publishes the List of Prohibited Substances and Methods. This is done in consultation with experts in the field and WADA's many stakeholders, involving an extensive year-long process. Development of the List involves three meetings each year of the List Expert Group. The List is approved by WADA's Executive Committee in September of each year and published three months prior to it coming into effect on 1 January.

It is important to be clear that it is not ASADA's role to determine which substances and methods go onto the Prohibited List—this is WADA's role.

We would also like to provide you with information we have provided regarding the rules around the WADA Code and support personnel

The anti-doping rules in Australia comply with those set by the World Anti-Doping Agency (WADA), the organisation that defines the World Anti-Doping Code (the Code).

There are eight ways in which an athlete or support person can breach the Code, or commit an anti-doping rule violation.

The WADA Code violations of Presence, Use and Failure to Comply apply to athletes only.

While Use of a prohibited substance by a support person will not be a breach of the WADA Code, depending on the outcomes of any investigation, support personnel may be potentially liable for other anti-doping rule violations, namely, trafficking of a prohibited substance, administration of a prohibited substance, and attempted trafficking and administration.

#### **Status of substances**

Provided as background:

#### **Hexarelin**

Since 2004 releasing factors for growth hormone, such as Hexarelin, have been banned under WADA's Prohibited List.

#### **Actovegin**

Please note this link contains information as to the status of Actovegin in sport according to the World Anti-Doping Agency (as at 2012):

<http://www.wada-ama.org/en/Resources/Q-and-A/2012-Prohibited-List/>

It's status under the Prohibited List has not changed in 2013.

#### AOD9604

ASADA has received advice from WADA stating that the WADA List Committee experts, based upon the information available to them, concluded that AOD-9604 should be considered as a substance falling under the S0 category of the 2012 and 2013 Prohibited Lists.

#### Cerebrolysin

Under the WADA Prohibited List Cerebrolysin is not prohibited in sport.

#### Uniquinone

As a pure substance Uniquinone is not prohibited in sport under the WADA PL. However, Uniquinone may be included as an ingredient in a supplement.

In Australia, supplements that belong to the pill, potion and powder category fall under the control of the TGA. Most fall within the 'listable' items category, the most lightly regulated category of the TGA, and are required only to provide proof that they don't contain ingredients that are banned by our custom laws.

ASADA's position on supplements has been consistent for many years and can be found on our [website](#). This position has been conveyed to sports and athletes on a number of occasions. One such occasion occurred in 2010 when [ASADA cautioned athletes](#) in the use of supplements following a number of positive tests for methylhexanamine. It is for the reasons provided on our website that we are unable to definitively provide athletes with advice on supplement products. However, our warning about supplement use is very clear— athletes who take supplements are at risk of committing a possible anti-doping rule violation.

#### Thymosin

#### Solcoseryl

#### Lactaway

#### Comfrey

This will require further consultation with our science department who were unavailable late this afternoon, so we will not be able to provide this information today. Please let us know if you still require us to get back to you on these.

placental cells

Can you please provide further information regarding what type of placental cells you are referring to (e.g. stem cells)?

Hi [REDACTED]

Further to our earlier discussion, 7.30 plans to run a story tonight that includes references to various substances.

Can you please confirm if these substances are banned for use by AFL players -- and/or coaches?

For those that are banned, can you please tell us the date they become banned for AFL players and coaches?

- Hexarelin
- Thymosin with Uniquinone
- Cerebrolysin
- Solcoseryl
- placental cells
- Actovegin
- Lactaway
- Comfrey
- AOD9604

Many thanks,

I have checked the individual ingredients in this supplement but cannot find all of them on your website.

The supplement is called Craze Pre Workout

What I cant find are :

Dendrobex = dendrobium Dendroxine Dendramine

Citramine = N-methyltyramine

I see the supplement has caffeine but not sure of the amount in it.

Many thanks

Dr [REDACTED]

Dear [REDACTED]

I have been asked to contact you in regards to a supplement called 'Craze' which ASADA has received a number of queries about.

A number of the queries have cited a supposed response from the TGA on a bodybuilding forum (<http://www.bodybuildingforums.com.au/training-and-exercise/3464-craze-now-illegal-in-australia-4.html>).

I have extracted the response and copied this below for your convenience. Before we develop our own response, we were hoping to check with you that this is in fact a bona-fide TGA response?

Any assistance would be greatly appreciated.

Yours sincerely

[REDACTED]

**TGA**

*The product Driven Sports Craze was recently tested by the National Measurement Institute (NMI) on behalf of the Australian Sports Anti-Doping Authority (ASADA).*

*The results indicated that Driven Sports Craze was found to contain Alpha-Diethyl-Benzeneethamine which is a synonym for Methamphetamine.*

Methamphetamine contains the stereoisomer Levomethamphetamine which is a prohibited import substance under Customs legislation.

As a result, the importation of Driven Sports Craze into Australia would see the product seized by Customs officials due the presence of this prohibited import ingredient present in the formulation.

As a result, the importation of Driven Sports Craze into Australia is a Customs matter.

Businesses or persons supplying Driven Sports Craze within Australia are liable to action from the relevant Food Authority Enforcement Branch in each State as Driven Sports Craze is a powder product that you add water to before consuming. These types of products are generally considered to be foods.

The TGA are responsible for the regulation of medicines which are typically products in capsule and tablet format that make therapeutic claims on the label.

**Importance:** High

Hi [REDACTED]

In [REDACTED]'s absence I am forwarding to you proposed responses to [REDACTED] (ABC Background Briefing) and [REDACTED] (730 program) for your review.

The journalists are quite keen to get these back today so hoping you can review at your earliest convenience.

Please let me know if you have any questions.

Thanks

[REDACTED] - ABC Background Briefing

Dear [REDACTED]

The following has been provided to you as background information to assist in addressing the questions you have raised.

Does ASADA ever approve a supplement program? Can a doctor or sports scientist come to ASADA and say "I am going to give my athletes X, Y and Z" and get the seal of approval from ASADA? (Or, do all inquiries go through the hotline/CYS?)

Generally ASADA's policy is to not approve a supplement or a supplement program.

The reasons for this are outlined in the supplement warning information detailed on ASADA's [website](#).

"a supplement contains IGF-1 - which is a banned supplement - would that mean using the supplement puts an athlete in each of the WADA code?"

The [substance](#) IGF-1 is prohibited in sport under the World Anti-Doping Agency's Prohibited List.

It is for the reasons provided on [our website](#) that we are unable to answer your question regarding the status of a supplement. However, our warning about supplement use is very clear— athletes who take supplements are at risk of committing a possible anti-doping rule violation.

[REDACTED] 7.30 Program

I notice the substance N,alpha-diethylbenzeneethanamine is listed on the 'check my substances' website.

Can you please clarify if the product DS Craze is a banned product (includes this substance) for Australian footballers?

The [substance](#) N,alpha-diethylbenzeneethanamine is prohibited in-competition only under the World Anti-Doping Agency's Prohibited List.

Because supplement (also referred to as dietary or nutritional supplements) manufacturing processes can lead to their contents varying from batch to batch, ASADA cannot advise whether, at any particular time, a specific supplement, or batch of a supplement, contains prohibited [substances](#).

It is for the reasons provided on [our website](#) that we are unable to answer your question regarding the status of this supplement. However, our warning about supplement use is very clear—athletes who take supplements are at risk of committing a possible anti-doping rule violation.

[REDACTED] ABC Background Briefing

[REDACTED]

The following has been provided to you as background information to assist in addressing the questions you have raised.

Does ASADA ever approve a supplement program? Can a doctor or sports scientist come to ASADA and say "I am going to give my athletes X, Y and Z" and get the seal of approval from ASADA? (Or, do all inquiries go through the hotline/CYS?)

Generally ASADA's policy is to not approve a supplement or a supplement program.

The reasons for this are outlined in the supplement warning information detailed on ASADA's [website](#).

... a supplement contains IGF-1 - which is a banned supplement - would that mean using the supplement puts an athlete in each of the WADA code?

The substance IGF-1 is prohibited in sport under the World Anti-Doping Agency's Prohibited List.

Because supplement (also referred to as dietary or nutritional supplements) manufacturing processes can lead to their contents varying from batch to batch, ASADA cannot advise whether, at any particular time, a specific supplement, or batch of a supplement, contains prohibited substances.

It is for the reasons provided on [our website](#) that we are unable to answer your question regarding the status of a supplement. However, our warning about supplement use is very clear-- athletes who take supplements are at risk of committing a possible anti-doping rule violation.

[REDACTED] 7.30 Program

I notice the substance N,alpha-diethylbenzeneethanamine is listed on the 'check my substances' website.

Can you please clarify if the product DS Craze is a banned product (includes this substance) for Australian footballers?

The substance N,alpha-diethylbenzeneethanamine is prohibited in-competition only under the World Anti-Doping Agency's Prohibited List. [note that I cannot actually find this substance on CYS but its status is listed in the [Errington matter](#)]

Because supplement (also referred to as dietary or nutritional supplements) manufacturing processes can lead to their contents varying from batch to batch, ASADA cannot advise whether, at any particular time, a specific supplement, or batch of a supplement, contains prohibited substances.

It is for the reasons provided on our website that we are unable to answer your question regarding the status of this supplement. However, our warning about supplement use is very clear— athletes who take supplements are at risk of committing a possible anti-doping rule violation.

Hi [REDACTED]

Suggest deleting this line from the [REDACTED] response only "Because supplement (also referred to as dietary or nutritional supplements) manufacturing processes can lead to their contents varying from batch to batch, ASADA cannot advise whether, at any particular time, a specific supplement, or batch of a supplement, contains prohibited substances." I think the rest of the response adequately deals with the question.

Hi [REDACTED] and [REDACTED]

For your approval please find below draft responses below to David Mark (ABC Background Briefing) and Nikki Tugwell (730 program). The responses are based on the discussions this morning between [REDACTED] and I which I hope are accurately reflected.

Please note that [REDACTED] and [REDACTED] have reviewed these.

If you could advise if you are okay with these it would be appreciated.

Thanks

Hi [REDACTED] and [REDACTED]

We have received a couple of queries in relation to a supplement called Craze.

One appears to be from a supplement retailer and the other a news website focussed on supplements.

I have looked into a forum that a link was provided for and apparently the TGA have provided the following advice to someone:

**TGA**

*The product Driven Sports Craze was recently tested by the National Measurement Institute (NMI) on behalf of the Australian Sports Anti-Doping Authority (ASADA).*

*The results indicated that Driven Sports Craze was found to contain Alpha-Diethyl-Benzeneethamine which is a synonym for Methamphetamine.*

*Methamphetamine contains the stereoisomer Levomethamphetamine which is a prohibited import substance under Customs legislation.*

*As a result, the importation of Driven Sports Craze into Australia would see the product seized by Customs officials due the presence of this prohibited import ingredient present in the formulation.*

*As a result, the importation of Driven Sports Craze into Australia is a Customs matter.*

*Businesses or persons supplying Driven Sports Craze within Australia are liable to action from the relevant Food Authority Enforcement Branch in each State as Driven Sports Craze is a powder product that you add water to before consuming. These types of products are generally considered to be foods.*

*The TGA are responsible for the regulation of medicines which are typically products in capsule and tablet format that make therapeutic claims on the label.*

in the same thread, Customs also apparently provided the following advice:

**Customs**

This is the reply I received from Canberra:

Testing by an Australian Authority detected an analogue of a Border Controlled Substance.

We are not able to comment on the US claims that no controlled substances were found, as the Australian controls may be different.

There are many supplements which are legally available in the US but are contain substances which are prohibited under Australian legislation.

The queries seem to be aiming to confirm this.

One of the contributors to the forum appears to be getting sued by a distributor of Craze due to him 'publishing' on the forum that Craze contains prohibited substances so we may need to be wary in our response.

Can you please advise how you would like to proceed?

Thanks

Hi [REDACTED]

We are in the process of preparing some communications materials for the new stimulant we have been seeing, N, alpha-diethyl-benzeneethanamine. We would like to provide alternative ways this substance could be written to allow people to look for it when buying products (this is similar to the approach we took for methylhexaneamine (see [here](#))).

I have got the following names from ChemSpider. I was wondering if you can think of any other ways which this substance could be written?

Benzeneethanamine, N,α-diethyl-

N-Ethyl-1-phenyl-2-butanamine

Regards

Hi [REDACTED]

Some time ago we spoke about DS Craze and the substance N,alpha-diethyl-benzeneethanamine.

Part of the supplements communication plan is to update the website with content similar to what we did for methylhexaneamine. Amongst other things this included the other names that methylhexaneamine might go by.

When we spoke you gave me the following list ... are you ok if we say N,alpha-diethyl-benzeneethanamine is also known as:

- 1-Phenyl-2-amino-butan [German]
- 1-phenylbutan-2-amine
- benzeneethanamine,  $\alpha$ -ethyl-
- Phenethylamine,  $\alpha$ -ethyl-
- (1-benzylpropyl)amine
- 1-Benzylpropylamine
- 1-Benzyl-propylamine
- 1-Fenyl-3-metylo-aminopropan [Polish]
- 1-Phenyl-2-aminobutane
- 2-Amino-1-phenylbutane

Cheers

Thanks for the approval ... I'll send it up the line.

Regarding UKAD - I received the attached email from [REDACTED] just after coming back from Christmas/New Year shutdown (sorry - thought I had mentioned it to you). The correspondence 'back and forth' that she refers to is between our Science Managers—they got wind of us testing DS Craze. I told [REDACTED] that at this stage we have only issued one ADRV announcement (published on 14 December) that has involved the stimulant in question. The announcement was low-key and did not include complementary communications warning athletes about supplements containing this substance. Reasons for this:

- At the time of publishing, we were still awaiting the outcome of the supplement test.
- The athlete in question did not at any point indicate that the presence of the stimulant was as a result of supplement use. As such, we could not go down this path in the announcement.

I told Caroline that we were considering our supplement messaging based on the emergence of this substance, however, how we plan to do this is still in its infancy. I didn't get a response from her.

\*Let me know how you would like me to proceed with this request.

Cheers

Subject: FOR REVIEW: Updated supplements communications plan [SEC=UNCLASSIFIED]

Hi [REDACTED]

As February is going to be a busy month, I wanted to revisit the supplements communications plan in a hope to get it out before next month if possible.

The plan is attached and includes copy for all our channels, including a media release. I made the focus on the percentage of athletes (one-third) who tested positive due to a dodgy supplement rather than focus on DS Craze alone. I wanted to make it about supplements in general – the main reason for this is that the stimulant in question (as I understand it) is called N,alpha-diethyl-benzeneethanamine (a mouthful for any spokesperson and not easily remembered by athletes).

Happy to go through the plan with you, but wanted your thoughts before you headed off.

Dear [REDACTED]

I have been asked to contact you in regards to a supplement called 'Craze' which ASADA has received a number of queries about.

A number of the queries have cited a supposed response from the TGA on a bodybuilding forum (<http://www.bodybuildingforums.com.au/training-and-exercise/3464-craze-now-illegal-in-australia-4.html>).

I have extracted the response and copied this below for your convenience. Before we develop our own response, we were hoping to check with you that this is in fact a bona-fide TGA response?

Any assistance would be greatly appreciated.

Yours sincerely

[Redacted signature]

Hello,

I am the senior editor for NutraIngredients-USA, a leading news site for the US dietary supplements industry. I am following up allegations from an Australian body building forum (<http://www.bodybuildingforums.com.au/training-and-exercise/3464-craze-now-illegal-in-australia-4.html>), which claims:

“The product Driven Sports Craze was recently tested by the National Measurement Institute (NMI) on behalf of the Australian Sports Anti-Doping Authority (ASADA).

The results indicated that Driven Sports Craze was found to contain Alpha-Diethyl-Benzeneethamine which is a synonym for Methamphetamine.”

Can you confirm or deny this? Is there a link to this data?

Many thanks and kind regards,

[REDACTED]

Hi ASADA

I'm wondering if you are able to share more details of the nature of the supplement suspected to return the positive result for N,alpha-diethyl-benzeneethanamine?

I have read second hand information that you have subsequently tested the supplement craze which is claimed to include this ingredient?

Can you please confirm or put me in touch with the agency to have conducted the testing?

Thanks [REDACTED]

[REDACTED]

That is definitely not an official TGA statement on that bodybuilding forum.

In fact I am advised that Driven Sports Craze does not fall within the regulatory responsibilities of the TGA, and that Food Standards Australia New Zealand (FSANZ) would be a better contact point to assist.

I've cc'd [REDACTED] at Food Standards.

Dear [REDACTED]

I have been asked to contact you in regards to a supplement called 'Craze' which ASADA has received a number of queries about.

A number of the queries have cited a supposed response from the TGA on a bodybuilding forum (<http://www.bodybuildingforums.com.au/training-and-exercise/3464-craze-now-illegal-in-australia-4.html>).

I have extracted the response and copied this below for your convenience. Before we develop our own response, we were hoping to check with you that this is in fact a bona-fide TGA response?

Any assistance would be greatly appreciated.

Yours sincerely

[Redacted signature]

**TGA**

The product Driven Sports Craze was recently tested by the National Measurement Institute (NMI) on behalf of the Australian Sports Anti-Doping Authority (ASADA).

The results indicated that Driven Sports Craze was found to contain Alpha-Diethyl-Benzeneethamine which is a synonym for Methamphetamine.

Methamphetamine contains the stereoisomer Levomethamphetamine which is a prohibited import substance under customs legislation.

As a result, the importation of Driven Sports Craze into Australia would see the product seized by Customs officials due the presence of this prohibited import ingredient present in the formulation.

As a result, the importation of Driven Sports Craze into Australia is a Customs matter.

Businesses or persons supplying Driven Sports Craze within Australia are liable to action from the relevant Food Authority Enforcement Branch in each State as Driven Sports Craze is a powder product that you add water to before consuming. These types of products are generally considered to be foods.

The TGA are responsible for the regulation of medicines which are typically products in capsule and tablet format that make therapeutic claims on the label.

Hi [REDACTED]

Has any more information come to light about the stimulant cases that you had?

Has 1-Phenylbutan-2-amine been confirmed as the substance?

Have the athletes been charged?

Has Craze been confirmed as the source?

Have WADA been informed?

Etc etc

We feel that if there is a risk to athletes we have a responsibility to make them aware and for that reason we are keen to continuing to talk with yourself and to engage your comms so that we provide the necessary information and avoid impacting any cases etc

Cheers

Hi [REDACTED]

Thanks for your E-mail.

As you can probably understand we have been flat-out with all the cycling enquires coming in at the moment. This is taking all our resources.. The supplement issue is a high priority and will be looked at more shortly.

To be honest, I think it will be best to hold off E-mailing our comms guys. I did have a chat to [REDACTED] (from our comm group) to let him know you were interested in knowing what was happening. I will touch base with him tomorrow and find out where he is at.

I will keep you informed.

Cheers

Hi [REDACTED]

Further to our discussion of this with [REDACTED], I have re-drafted the response below to [REDACTED]

I hope this accurately reflects the discussion.

If you could advise if you are okay with this it would be appreciated.

Thanks

[REDACTED]

[REDACTED] - ABC Background Briefing

Dear [REDACTED]

The following has been provided to you as background information to assist in addressing the questions you have raised.

Does ASADA ever approve a supplement program? Can a doctor or sports scientist come to ASADA and say "I am going to give my athletes X, Y and Z" and get the seal of approval from ASADA? (Or, do all inquiries go through the hotline/CYS?)

Generally ASADA's policy is to not approve a supplement or a supplement program.

The reasons for this are outlined in the supplement warning information detailed on ASADA's [website](#).

If a supplement contains IGF-1 - which is a banned supplement - would that mean using the supplement puts an athlete in breach of the WADA code?

The substance IGF-1 is prohibited in sport under the World Anti-Doping Agency's Prohibited List.

Because supplement (also referred to as dietary or nutritional supplements) manufacturing processes can lead to their contents varying from batch to batch, ASADA cannot advise whether, at any particular time, a specific supplement, or batch of a supplement, contains prohibited substances.

It is for the reasons provided on [our website](#) that we are unable to answer your question regarding the status of a supplement. However, our warning about supplement use is very clear— athletes who take supplements are at risk of committing a possible anti-doping rule violation.

[REDACTED] - 7.30 Program

I notice the substance N,alpha-diethylbenzeneethanamine is listed on the 'check my substances' website.

Can you please clarify if the product DS Craze is a banned product (includes this substance) for Australian footballers?

The substance N,alpha-diethylbenzeneethanamine is prohibited in-competition only under the World Anti-Doping Agency's Prohibited List. [note that I cannot actually find this substance on CYS but its status is listed in the Errington matter]

Because supplement (also referred to as dietary or nutritional supplements) manufacturing processes can lead to their contents varying from batch to batch, ASADA cannot advise whether, at any particular time, a specific supplement, or batch of a supplement, contains prohibited substances.

It is for the reasons provided on our website that we are unable to answer your question regarding the status of this supplement. However, our warning about supplement use is very clear— athletes who take supplements are at risk of committing a possible anti-doping rule violation.

---

**From:** [REDACTED]

**To:** [REDACTED]  
**Cc:** [REDACTED]  
**Subject:** RE: For approval - response to [REDACTED] ABC Background Briefing [SEC=UNCLASSIFIED]

It doesn't really answer the question – did you get these responses from [REDACTED] or [REDACTED]? Does ASADA approve supplement programs? No. If a supplement contains a prohibited substance does that make the supplement prohibited? The substance is prohibited. End of story. Can we get the content owner to be a bit more definitive around this stuff, as otherwise there is no point in even responding – they'll just come back with more questions.

---

**From:** [REDACTED]  
**Sent:** Thursday, 18 April 2013 9:59 AM  
**To:** [REDACTED]  
**Cc:** [REDACTED]; [REDACTED]  
**Subject:** For approval - response to [REDACTED] ABC Background Briefing  
**Importance:** High

Hi [REDACTED]

For approval please find below draft responses to [REDACTED] ABC Background Briefing.

His questions and draft responses are below.

Can you advise if you are okay with this? Will also clear with Exec, unless advised otherwise.

Thanks

[REDACTED]  
Dear David

The following has been provided to you as background information to assist in addressing the questions you have raised.

Does ASADA ever approve a supplement program? Can a doctor or sports scientist come to ASADA and say "I am going to give my athletes X, Y and Z" and get the seal of approval from ASADA? (Or, do all inquiries go through the hotline/CYS?)

ASADA provides advice to athletes and support personnel in a number of ways.

#### Supplements

ASADA's position on supplements has been consistent for many years and is available on its website.

It is important to firstly clarify the term 'supplement' as ASADA refers to it.

In Australia, supplements that belong to the pill, potion and powder category fall under the control of the TGA. Most fall within the 'listable' items category, the most lightly regulated category of the TGA, and are required only to provide proof that they don't contain ingredients that are banned by our custom laws. Supplements (also referred to as dietary or nutritional supplements) are usually made up of a number of substances (ingredients).

Because supplement manufacturing processes can lead to their contents varying from batch to batch, ASADA cannot advise whether, at any particular time, a specific supplement, or batch of a supplement, contains prohibited substances. As such, ASADA's warning about supplement use is very clear— athletes who take supplements are at risk of committing a possible anti-doping rule violation.

#### **Over the counter and complementary medicines**

In instances where World Anti-Doping Agency (WADA) prohibited substances are contained in over the counter and complementary medicines in Australia, ASADA offers an online 'Check your substances' resource. This resource allows athletes and support personnel to check the status of Australian brand medication. This online search tool, is not intended to cover every substance, but provides information for the most commonly prescribed, over the counter and complementary medicines in Australia. When someone conducts a search on 'Check your substances' there are two important messages that appear:

*'IMPORTANT: If you cannot find your search term on 'Check Your Substances' that does **NOT** mean that it is permitted in sport. Further, 'Check your Substances' lists whether substances are prohibited in sport in accordance with WADA's Prohibited List as amended from time to time. Results from searches conducted on 'Check your Substances' are in no way intended to indicate whether it is legal to possess or use these substances under Australian Federal, State or Territory laws.'*

*'Do not use 'Check your Substances' to search for supplements or supplement ingredients. Please go to the following link for [supplements](#) for more information regarding supplements and supplement ingredients.'*

#### **Telephone assistance**

ASADA's telephone advice service is consistent with the information provided by the online 'Check your substances' tool.

#### **Education**

Education is an important part of ASADA's comprehensive approach to protect Australia's sporting integrity through the elimination of doping and its anti-doping education program is one of the best in the world.

ASADA invests heavily in world class anti-doping education. In the last financial year more than 11,000 athletes and support personnel participated in online and face-to-face education activities supplied by ASADA.

Face-to-face education sessions are only one aspect of ASADA's program, its offerings also include Australia's first online anti-doping education service which is available 24/7; provision of anti-doping DVDs and publications; social media channels; and the issuing of regular information and updates through direct communication to athletes.

ASADA's education program aims to reduce the number of athletes contemplating doping, reinforce health messages, reduce the percentage of inadvertent anti-doping rule violations and raise anti-doping awareness throughout the Australian sporting community.

**If a supplement contains IGF-1 - which is a banned supplement - would that mean using the supplement puts an athlete in breach of the WADA code?**

Refer to above information regarding supplements, in particular:

ASADA has for many years cautioned athletes considering the use of supplements. ASADA cannot advise whether, at any particular time, a specific supplement, or batch of a supplement, contains prohibited substances. Athletes who take supplements are at risk of committing a possible anti-doping rule violation.

Every case presented to ASADA is unique and every athlete or support person who faces a possible anti-doping rule violation has the opportunity to present their side of the story. The individual circumstances surrounding a case can affect the outcome of a matter.

**Subject:** Query about the new substance we are finding in supplements (N,alpha-diethyl-benzeneethanamine) [SEC=UNCLASSIFIED]

[REDACTED]

Not sure if you remember, but we spoke a few years ago about the two race car drivers caught with methamphetamines. If you have moved on, can you please put me in contact with who I should speak to.

My boss has asked me to follow-up with police services on whether this substance is prohibited under state and territory law. We have started to find it in positive tests and believe it is the replacement for methylheaneamine, which was added to the SUSMP by the TGA last year.

The substance is closely related chemically to meth and is apparently only one or two molecules away from it.

( you could confirm whether this substance is illegal in the Northern Territory it would be much appreciated.

Regards

**Subject:** RE: Information request - stimulants [SEC=UNCLASSIFIED]

G'day [REDACTED]

We spoke about this last year, but [REDACTED] has asked me to check on something.

According to our chemist here, the information Benjamin sent about Alpha-diethyl-Benzeneethamine may not be 100% correct as it is Alpha-dimethyl-Benzeneethamine which is the synonym for methamphetamine (which is a fair enough mistake given I can't even pronounce this).

Can you please just double check the status on Alpha-diethyl-Benzeneethamine.

Cheers

### Alpha-diethyl-Benzeneethamine

This is a synonym for the substance methamphetamine (classified as a psychotropic under U.N convention). Methamphetamine has two stereoisomers (levomethamphetamine and dextromethamphetamine). Both are considered prohibited imports and exports.

### 1-Phenylbutan-2-amine

Is chemical closely related to amphetamine, and research indicates in offers similar physiological stimulus and effects to amphetamines, however it is not considered a prohibited import or prohibited export.

I would recommend contacting the Australia Federal Police about the status of both these substances in regards to the *Criminal Code Act 1995*.

I hope this has assisted you

Kind Regards

[REDACTED]

Hi [REDACTED]

Sorry about the delay

I think perhaps you could ask TMU about these ones being that they appear to be closely related to methyl amphetamines. In addition you could also contact the Medicines and Poisons Scheduling Secretariat to see if these substances may be captured as derivatives.

Regards

[REDACTED]

As discussed, we have had athletes test positive to the substance below (one or both may be a metabolite).

- \* Alpha-diethyl-Benzeneethamine
- \* 1-Phenylbutan-2-amine

From information we have received, we believe it may be in one or more of the following supplements:

- \* Craze Performance Fuel
- \* IMR
- \* Mesomorph

As I mentioned to [REDACTED], we think this may be the substance that is replacing Methylhexaneamine in supplements.

Also, for your information, ASDTL has advised us that these substances are chemically very closely related to methyl amphetamines.

Grateful if you could check whether these substances have come to notice in any of these or other supplements.

Cheers

[REDACTED]

G'day [REDACTED]

( Can you check whether the following substances have come to the TGA's notice.

We think these substances may be replacement stimulants for methylhexaneamine (1,3-dimethylamylamine) with its impending listing. As such, we believe these substances may be in supplements.

If these substances have come to notice, can you please advise if they were in a particular product and what the name of that product is.

Cheers
